Complete Cleaning Company

March 16, 2020

As your professional building services company we have implemented steps to provide your students, staff and the community a safe and healthy environment. These steps have been developed with recommendations from the US Center for Disease Control (CDC), and the Massachusetts Department of Public Health. The following common areas and touch-points will be targeted with our preventive measures and methods, using EPA registered and approved products:

Handrails, push-bars, glass surfaces, doorknobs, door edges, frames, bathroom fixtures, light switches and plates, weight room equipment, exterior of lockers, cabinets, drinking fountains, desks, counters, table tops and other horizontal surfaces.

We utilize spray and wipe methods and also incorporate Electrostatic Spraying Technology for covering large areas or in case specific situations.

Complete Cleaning Company, Inc. at HCC on March 16, 2020
